Final Figma rules

- Inter-first UI typography; official logo typography remains the supplied asset.
- Brand colors are locked; semantic/neutral/blue ramps are the UI layer.
- Glass creates hierarchy; dense operational data remains solid/high-opacity.
- Website is expressive; CRM is operational; Admin is precise and restrained.
- Journey/Route language is subtle and derived conceptually from connection, progress and destination.
- Status never relies on color alone.
- No full application screens or production coding are included in this phase.
- Brand Foundation v1.2 is ready to translate into Figma.
