

PROJECT DESCRIPTION:

Senior Full-Stack Developer – Travel & Visa Platform We are looking for an experienced Senior Full-Stack Developer for a long-term project to develop a modern travel, visa, CRM, booking, and business management platform. The platform is a large web application with multiple connected modules. We need a developer who can understand business requirements, work with an existing codebase, build new features, solve technical problems, and deliver clean, secure, production-ready code. Technology Stack * Next.js / React * TypeScript * Node.js * PostgreSQL * Prisma ORM * Tailwind CSS * REST APIs * Git & GitHub * Coolify / Nixpacks Experience with Docker, CI/CD, authentication, RBAC, cloud deployment, and third-party API integrations is a plus. Responsibilities * Develop frontend and backend features * Build scalable and maintainable architecture * Design and manage database structures * Develop APIs and integrations * Implement authentication and role-based permissions * Convert Figma designs into responsive UI * Fix bugs and improve existing functionality * Optimize performance and security * Test features before deployment * Manage staging and production deployments * Follow proper Git/GitHub workflows * Maintain technical documentation Main Modules The platform will include: CRM / Dashboard * Customers * Leads * PAX * Quotations * Bookings * Payments * Refunds * Documents * Communications * Customer history and timeline Visa Management * Visa products * Countries * Requirements * Applications * Documents * Partners * Vendors * Processing workflows * Pricing and configuration Administration * Users * Roles and permissions * Companies * Vendors * Configuration * Reports * Audit logs Additional modules and integrations will be developed over time. Ideal Candidate Strong practical experience with: * Next.js / React * TypeScript * Node.js * PostgreSQL * Prisma * REST APIs * Database architecture * Authentication & RBAC * Git/GitHub * Production deployment Experience building CRM, ERP, SaaS, booking, travel, visa, marketplace, or other complex business applications is highly preferred. We need someone who: * Writes clean and maintainable code * Understands business requirements * Can work independently * Communicates clearly * Can troubleshoot technical issues * Makes good technical decisions * Understands security and scalability * Is comfortable working with an existing codebase * Is interested in a long-term relationship Hiring Process We will: 1. Review your Upwork profile and portfolio 2. Conduct a technical interview 3. Review relevant previous projects 4. Provide a small paid trial task 5. Start with an initial trial period 6. Continue long-term based on performance Proposal Requirements Please answer these questions in your proposal: 1. How many years of experience do you have with Next.js and TypeScript? 2. How many years of experience do you have with Node.js and PostgreSQL? 3. What is your experience with Prisma? 4. Have you built CRM, ERP, SaaS, booking, travel, or visa platforms? 5. Share 2–3 relevant

projects you personally developed. 6. What was your role in those projects? 7. Are you comfortable with GitHub branches and Pull Requests? 8. What is your weekly availability? 9. What is your hourly or monthly rate? 10. Are you available for long-term development? Please do not send a generic proposal. Explain your relevant experience and why you are a good fit for this project. We are looking for a reliable long-term technical partner who can help build, improve, and maintain the platform as it grows.

MY MSG:

I reviewed the project scope and the core modules for your travel, visa, and CRM platform; it's a comprehensive build that lines up directly with my technical stack.

Are you currently using a specific authentication provider (like NextAuth/Auth.js or Clerk), or should that be set up from scratch?

CLIENT REPLY:

Setup from scratch

MY MSG:

Is the existing codebase already structured as a monorepo, or are the frontend and backend split into separate repositories?

CLIENT:

Need to start from scratch

MY MSG:

We will work from scratch and will share the progress with you at each step so all the requirements will be clear from the start and you will be satisfied. Is that how I work? I want my client's satisfaction and deliver the work in top-notch quality. Hope it sounds good to you.

Can you please let me know your budget and deadline for it?

Ye saari files di thi client ne phr. Here is project details please review and let me know what's your expectations and timeline

MY MSG:

Everything has been reviewed and understood, and all project details, workflows, and master documents are completely clear. Please share your expected timeline and budget preferences so we can align accordingly.

CLIENT MSG:

Please advised me your timeline and charges

MY MSG:

For the complete execution of the website, CRM, and Admin modules, my standard charges for this scope are 35,000 INR with a timeline of 10 to 12 days. I ensure proper end-to-end testing, and I provide unlimited revisions if you need any adjustments or run into any issues along the way. However, I would love to hear your budget so we can work together within a fair range that suits you. Let me know your thoughts!

CLIENT MSG:

What's included in your budget

MY MSG:

Complete Website Development: A super clean, modern, and travel-focused frontend covering all service journeys (New Visas, Visa Extension, Visa Change, Flight Special Fares, Return Verified Tickets, and OTB, plus Track Status and the AI assistant flow. CRM System: The full operational workspace for staff to manage leads, customer details, document validations, and daily workflows. Admin Control Panel: The complete configuration layer where you can control services, pricing, dynamic workflows, staff permissions, vendors, and coupons without touching code. Smart Business Logic: Built-in features like OTB requirement checks, quote timers, upsell paths, and automated system triggers. Testing & Support: Thorough testing across everything, plus unlimited revisions and tweaks whenever you need them during or after the build.

CLIENT MSG:

Whats your timeline

MY MSG:

10 to 12 days. but if you want it more early than this, I can fast-track your project and will deliver it by your deadline.

CLIENT MSG:

What about automation

MY REPLY:

It also covers complete automation for instant WhatsApp and email notifications at every milestone, smart operational triggers like quote expiration timers and automated OTB checks, and an n8n monitoring view to track all background workflows seamlessly.

THEN CLIENT SEND ME THESE SITES LINK FOR REFERENCE:

CLIENT MSG:

[Atlys.com](https://atlys.com)

[Visa2fly.com](https://visa2fly.com)

Ek bar aap review krle desktop and mobile version

MY REPLY:

dekhliya bhai mobile version or desktop version dono.

To get started with the project development, please share the following details: High-resolution brand logo in PNG or SVG format, along with any specific brand color codes or typography guidelines. Complete content details, including exact service lists, visa requirements, pricing details for each destination, and any specific contact info or terms for the website. API credentials and access details for your WhatsApp Business API, email/SMTp provider, payment gateway, and hosting or server panel (such as Hostinger) when we reach the integration phase.

CLIENT MSG:

Need to creat whatsapp api

MY REPLY:

You don't need to create the WhatsApp API right now; I will let you know when I need it and I'll ask for it once we reach that stage. In the meantime, please create the award and milestone so I can align everything and start setting up the structure.

CLIENT MSG:

Aap documents bhej skte he jisme aap kya and kab banaoge so bad koi confusion na ho

MY REPLY:

MENE DOCUMENT NHI YE MSG BHEJDIYA THA

Phase 1: Frontend UI & Core User Journeys Next.js aur Tailwind CSS par poori website ka architecture aur layout framework set kiya jayega. Desktop aur mobile dono ke liye responsive, lightning-fast aur pixel-perfect screens banayi jayengi (jaise visa browsing, flight bookings, OTB, aur tracking portals) jo aapki diye gayi reference sites se bilkul match karenge or usse acha bnadongaa or.

Phase 2: Backend, Database & CRM Workspace Node.js ka backend server, PostgreSQL database, aur Prisma ORM ke zariye strong data management setup kiya jayega. Staff ke liye ek dedicated CRM dashboard banaya jayega jahan se woh customer leads, data tracking, aur document verification ke saare workflows easily handle kar sakenge.

Phase 3: Admin Panel & Automation Setup Centralized admin panel banaya jayega jisse pricing, user roles, discount coupons, aur vendor management par mukammal control mil sakega. n8n workflows aur background monitoring systems configure kiye jayenge taake saare automated operational triggers aur alerts bagair kisi rukawat ke kaam karein.

Phase 4: Integrations & Final Handover Payment gateways, email/SMTP providers, aur WhatsApp API ki credentials milne par unhein safely integrate kiya jayega. Saare user flows par thorough end-to-end testing ki jayegi, minor tweaks kiye jayenge, aur final production-ready platform handover kiya jayega.

CLIENT MSG:

Ocr ka zikar nahi he isme

MY REPLY:

jo jo reh gya btadein add on krdonga

CLIENT MSG:

Whatsapp api aap create krke denge right??

MY REPLY:

Aap apne Meta Business Manager se WhatsApp Cloud API ka Permanent Access Token aur Phone Number ID de dein, baaki ka saara backend code aur integration main khud handle kar loonga.

CLIENT MSG:

And invoice generate system gateway fee calculation, achha ek or suggetion de ki user login banega ??

MY REPLY:

Gateway fee calculation aur user login system dono bilkul add kar diye jayenge. Gateway fee ka yeh faida hoga ke online payment par jo percentage cut hoti hai, woh automatically calculate ho kar manage ho jaye gi taake koi loss na ho. Aur user login hone se clients apni bookings track kar sakenge aur invoices download kar sakenge. Aap agar kehte hain toh main yeh dono cheezein project mein add kar deta hoon, ismein koi masla nahi hai!

CLIENT MSG:

Vps mera liya hua he

Uski abhi zarurat hogi ya bad mai

MY MSG:

VPS server ki abhi initial development mein zaroorat nahi hai. Abhi poora design aur codebase local machine par build ho raha hai. Jab staging aur live testing ka time aayega, tab main aap se VPS credentials le loonga taake server setup aur deployment shuru kar sakein.

CLIENT MSG:

Ocr, automation, whatsapp api and all including he

MY MSG:

Jee bhai sb include hai

CLIENT MSG:

FINAL btadein price,

MY MSG:

30k inr me final krdein

CLIENT MSG:

Done

CLIENT MSG:

Vps jab tak mai cancel krdu

MY MSG:

VPS agar aapne le liya hai toh abhi rakh sakte hain, waise iski zaroorat development ke baad jab testing aur live deployment ka time aayega tab paregi. Agar subscription ka issue hai aur cancel karna chahte hain toh kar sakte hain Paise bilkul zaya nahi honge, VPS ko abhi active rehne dein. 10 se 15 din baad jab poora system develop ho jayega, tab hum ise usi VPS par live deploy karke test kar lenge.

CLIENT MSG:

Aap mere system mai sab run krke doge right like all tools install and run and provide basic training to operate system also data export option in admin panel and make sure mujhe aap pahle batayenge kya kiya he kya missing so kuchh miss na and invoice part mai gst ka option tax on services fee hona chahiye

Vps ka cost 2500 inr per month arha he abhi

Figma bhi cancel krdu?

MY MSG:

Haan bilkul, yeh sab cheezein (setup, training, data export, aur GST tax on services fee) poori tarah included hain. Aap milestone create kar do, phir hum start karte hain!

Hnn phr cancel krdo jb deploy hojaega tu me btadonga phr purchase krlena

Figma cancel mat karein, kyunki saare UI/UX wireframes, layouts, aur design assets usi par banenge aur final design review ke liye uski zaroorat padegi.

CLIENT MSG:

Aap to direct drsign krne wale the?

Mail and whatsapp tamplate aap hi doge right?

And last question customer sign up ya login kis method se denge

MY REPLY:

Figma cancel kar dein, koi masla nahi hai. Main khud UI design kar loonga aur aapko dikha dunga, jab aap approve kar denge tab main aage barh jaonga.

CLIENT MSG:

Abhi to 25 din he figma ka

Uske bad cancel krdunga

MY REPLY:

Email aur WhatsApp dono ke professional templates main khud design karke dunga, jo system mein direct integrate ho jayenge.

CLIENT MSG:

Sign up login option?

MY REPLY:

Login aur signup ke liye yeh methods rahenge: Email & Password WhatsApp / SMS OTP verification (travel bookings ke liye sabse best aur reliable hai) Google One-Tap Login (ek click par fast sign-in) Aap bata dein, hum in teeno ko integrate kar dete hain.

CLIENT MSG:

Jo cheap ho

Abhi budget se kam krna he

Whatapp otp ya sma otp ziyada cheap hoga?

MY REPLY:

Jo sabse sasta aur asaan ho, uske liye hum Email & Password aur Google Login rakh lete hain. Ismein koi extra SMS/WhatsApp gateway ka monthly kharcha nahi aayega!

CLIENT MSG:

Perfect

Without login bhi option rhega but wo history check nahi payega right

MY REPLY:

Bilkul theek baat hai! Bina login ke guest user website par visit kar sakega, search kar sakega aur booking process tak ja sakega, lekin apni purani booking history ya active applications track karne ke liye use login karna parega.

CLIENT MSG:

Bas site hamara new modern and attractive and glassy and live screenlike aisa

ho mobile and desktop version
WhatsApp ya bot se login ki zarurat nahi

MY REPLY:

Bilkul! Site bilkul modern, attractive, glassy (glassmorphism UI with sleek blur effects), aur live screen jaisi futuristic look wali banegi jo mobile aur desktop dono par ekdum smooth aur responsive chalegi.

Theek hai, WhatsApp ya bot se login ki bilkul zaroorat nahi rakhte. Sirf Email/Password, Google Login, aur Guest Checkout ka option hoga taake system simple aur cheap rahe.

CLIENT REPLY:

3 milestones me break krunga 10k 7500 or 12500 INR

CLIENT MSG:

- * Complete technology stack
 - * Frontend technologies
 - * Backend technologies
 - * Database
 - * API structure
 - * Authentication system
 - * Role & permission system
 - * Admin system
 - * Dashboard system
 - * Third-party integrations
 - * Deployment method
 - * Testing approach
 - * Documentation
 - * Source-code handover
 - * Post-launch support
- All these include right?

MY REPLY:

Yes, all included.

CLIENT MSG:

- * Complete source code
- * GitHub repository

- * Database schema
- * Prisma schema/migrations
- * API documentation
- * Environment-variable documentation

ployment configuration

- * Build/deployment instructions
- * Technical documentation

You should provide right?

MY REPLY:

Haan, yeh saari technical deliverables (complete source code, GitHub repository, database schema, Prisma migrations, API & environment docs, deployment config, aur build instructions) mukammal taur par aapko di jayengi.

CLIENT MSG:

Where will development happen? Where will staging run? Where will production run? Who manages deployment? Who manages backups? How will rollback work if something breaks?

And main After a module is completed and approved, how long will you provide free bug-fixing/support for issues caused by your implementation?

MY MSG:

Development: Local machines (using VS Code, Git, and local databases). Staging: Hostinger VPS staging server (subdomain) for live testing. Production: Hostinger VPS production server (live domain). Deployment: Managed by us (fully automated or manual push to production). Backups: Automated database snapshots and server backups configured on Hostinger. Rollback: Version control via Git (reverting the commit/branch) and restoring the last stable database backup if an issue occurs.

Aik month ka free bug support bhi derha hon me agr koi mere code me issues aae baad me tu wo fix krdonga additional kch nhi

CLIENT MSG:

I would add these requirements 1. Developer must work through Git branches * Never directly modify production. * Feature/fix → Pull Request → staging → approval → production. 2. Staging must be a separate environment * Separate database from production. * Separate environment variables/secrets. *

Production data should not be used casually in staging. 3. Developer must provide deployment documentation * How to deploy * How to update database * How to rollback * Environment variables required * How to restore backup 4. Database migrations * All Prisma/database changes must be committed to Git. * No manual undocumented production database changes. 5. Backups must be tested * Don't just configure backups. * Developer should demonstrate that a backup can actually be restored. 6. Production access * You retain ownership/admin access to the VPS, GitHub, domain and database. * Developer gets only the access required for development. 7. 30-day bug support * After final delivery, developer fixes bugs related to the delivered scope at no additional cost for 30 days. * New features are separate work.

MY REPLY:

Bilkul agreed! Yeh saare professional standards aur safety rules (Git branch workflow, separate staging environment, Prisma migrations, deployment docs, backup testing, aur 30-day bug support) bilkul follow kiye jayenge, but possible ho tu phr paise barha dein, bug support 30 days ka dedonga.

MILESTONES BREAKDOWN APPROVED BY CLIENT:

Milestone 1 (UI, Layout & Frontend): 10,000 INR Modern glassmorphic UI, responsive mobile/desktop layouts, Next.js pages, and navigation.

Milestone 2 (Backend, Database & Core Logic): 7500 INR Database setup (Prisma/PostgreSQL), REST APIs, authentication (Email & Password + Google OAuth), and guest checkout functionality.

Milestone 3 (Integration, Testing & Deployment): 12,500 INR Third-party integrations, Hostinger VPS staging/production setup, documentation handover, and deployment finalization.

CLIENT MSG:

Bhai ji api isme include he? Yeh bhi batade isme kya include nahi he
And mere purana github repository, vs code, existing code wo kaise remove hoga
Isme kuchh aisa jo including nhi he jo mujhe alag se lena pre vps whatsapp api ke ilawa

MY MSG:

Haan, backend APIs (jaise authentication, bookings, aur data handling) aur required basic integrations isme fully included hain. Isme sirf woh cheezein shamil nahi hain jo project ke original scope ke alag koi naye features ya advanced third-party paid services hoon.

Domain Name: Domain registration ya renewal aapko khud purchase karni hogi.
Hosting / VPS: Hostinger ka VPS server aapko khud buy karke access dena hoga. Paid Third-Party APIs: Koi bhi paid SMS gateway (jaise Twilio), paid transactional email service (jaise SendGrid), ya paid third-party software subscriptions jo project ke liye use hon. WhatsApp / SMS APIs: Jaise pehle decide hua hai, WhatsApp integration ya SMS/OTP gateway is scope mein shamil nahi hai (in case agar future mein chahiye ho toh unke separate charges aur subscriptions honge). Baki core development, frontend, backend APIs, database setup, deployment configuration, aur 30-day bug support sab kuch is 30k INR (3 milestones) mein fully included hai.

CLIENT MSG:

Email ka resend ka api he

MY REPLY:

Apni purani GitHub repository ko settings -> Danger Zone se delete kar dein, aur VS Code ya server par jo purana code hai usko clean kar dein, phir hum bilkul fresh repository ke sath start karte hain

Haan, agar email ke liye Resend API use karni hai, toh uski API key aapko provide karni hogi (kyunki yeh paid/external service hai). Iske ilawa agar koi domain verification ya DNS settings karni hui, toh woh bhi hum set karwa lenge

CLIENT MSG:

Wo aap krdenge to achha hoga nee fresh har chiz hogi to achha usko archive mai krdenge all documentation and everything

MY REPLY:

Haan, aap bilkul befikr rahein! Main sab kuch bilkul fresh aur clean karwa dunga, purana data archive ho jayega aur ekdum new setup se start karenge.

CLIENT MSG:

Ok bhai done baki hardin kam and bat hoti rhegi and mai ab marketing plan mai lag jata hu
